PROFESSIONAL SUMMARY

Software engineer with 3+ years building scalable systems and shipping full-stack applications at Oracle, Amdocs, and ISN. Experienced across backend microservices, frontend interfaces, and end-to-end platform design. Proven track record optimizing performance (60% latency reduction), improving system reliability, and delivering user-facing features that drive measurable impact.

EDUCATION

University of North Texas

Master of Science, *Computer Science*

Aug 2025 - May 2027

GPA: 4.0/4.0

National Institute of Technology Warangal(NITW)

Bachelor of Technology, *Computer Science*

Jul 2018 - May 2022

GPA: 3.8/4.0

SKILLS

SKILLS: Programming Languages: Java, JavaScript, SQL, Python, C#, C, C++, Backend: Spring Boot, .NET, ASP.NET Core, REST APIs, Microservices, Entity Framework Core, Dapper, Frontend: React, Razor, HTML, CSS, Oracle JET, Knockout.js, Databases: SQL Server, PostgreSQL, MySQL, Cloud & DevOps: AWS, Docker, Kubernetes, OpenShift, Jenkins, CI/CD, Tools & Observability: Git, Jira, Postman, JUnit, Splunk, Kibana, Grafana, Prometheus, Core Concepts: System Design, Data Structures & Algorithms, Object-Oriented Programming, Database Design

WORK EXPERIENCE

ISN | Software Developer Intern | Dallas, Texas

Jun 2026 - Aug 2026

- Owned the end-to-end development of a self-service platform using React and ASP.NET Core REST APIs, enabling business users to resolve data mismatches without developer assistance and reducing turnaround time from 3–5 days to minutes for a process used approximately 600 times annually.
- Developed an LLM-based bug-resolution agent that analyzed logs and stack traces, used RAG to retrieve relevant code and previously resolved issues, and generated proposed patches and regression tests for developer review.

Oracle | Software Engineer

Oct 2024 - Aug 2025

- Improved page response times by approximately 60% and reduced query execution time by approximately 40% by optimizing SQL, applying service-level caching, and eliminating redundant API calls in Oracle Fusion Cloud.
- Built 15+ interfaces and task flows with faceted search, responsive components, and analytics views using Oracle JET, Knockout.js, JavaScript, and REST APIs, improving usability across configuration workflows.
- Developed a RAG-based assistant for Oracle Fusion Functional Setup Manager that answered setup and troubleshooting questions using retrieved product documentation, release notes, and task-dependency information.
- Built a document-processing pipeline to split FSM documentation into searchable sections, generate embeddings, and store them with module, release, and task metadata in a vector database for hybrid retrieval.
- Created Spring Boot REST APIs to retrieve relevant content, send grounded context to the LLM, and return answers with source references; integrated the APIs into an Oracle JET interface for task recommendations and troubleshooting guidance.

Amdocs | Software Developer

Jul 2022 - Oct 2024

- Developed Java and Spring Boot middleware and REST APIs integrating Digital One with Order Management systems, transforming product-order payloads into UPC requests and persisting transaction and status data in PostgreSQL, improving order-processing efficiency by approximately 35%.
- Implemented automated retry, fallout-tracking, and ticket-creation workflows for failed orders, reducing manual intervention by approximately 30% and support response time by approximately 40%.
- Built a React and Spring Boot fallout-management application that displayed failures across upstream and downstream services, allowing support teams to identify the failed processing stage, review error details, and retry eligible orders.

University of North Texas | Teaching Assistant / Instructional Assistant | Texas

Jan 2026 -

- Guided four capstone teams on system architecture, API design, backend implementation, Agile planning, and risk management, improving the quality and completeness of milestone deliverables.
- Evaluated algorithm solutions and provided feedback on correctness, time complexity, and implementation quality for undergraduate computer science coursework.

PROJECTS

Multimodal Product Intelligence Platform |

Jan 2026 -

- Improved Precision@5 from 0.61 to 0.72 and achieved an MRR of 0.81 by engineering a hybrid retrieval pipeline with CLIP embeddings, FAISS, BM25, Reciprocal Rank Fusion, and category-aware reranking.
- Built an end-to-end multimodal platform that converted image and text queries into ranked product matches, structured attributes, and seller-ready content through FastAPI services and a React interface.
- Integrated YOLOv8 and ResNet-50 for detection and classification, plus Gemini and DALL-E 3 for attribute extraction and generative content.

CERTIFICATIONS & ACHIEVEMENTS

- Microsoft Certified: Azure AI Fundamentals (AI-900) - Microsoft
- AWS Certified Developer - Associate - Amazon
